

NEOLINE

G-TECH X54

TWO-CHANNEL VIDEO RECORDER

POSSIBILITY OF INSTALLATION ON VANS

INSTALLATION IN DIFFERENT LOCATIONS

The central unit of the Neoline G-Tech X54, unlike traditional dashcams, is installed in a discreet location, while the compact camera is so small that it doesn't attract attention. Thanks to this, the device is installed once, and there is no need to constantly remove it in the parking lot.

The Neoline G-Tech X54 dashcam has a Full HD front camera and a Full HD rear camera that records all the details on the road behind the car.

DUAL CHANNEL RECORDING FHD+FHD

The Neoline G-Tech X54 delivers high video quality and detail thanks to a powerful processor, Sony Starvis IMX307 sensor and a 1:1.6 aperture lens. This technology allows to record Full HD video, so it can record high quality and detailed videos not only during the day but also at night.

FULL HD

1920x1080

HIGH-QUALITY RECORDING DAY AND NIGHT

NEOLINE G-Tech X54 is equipped not only with excellent optics and matrix, but also with a special algorithm to increase detail in low light conditions.

CONNECTING THE CAR ALARM SYSTEM

Additional cable connection to the unit hub. This connector will allow to connect a car alarm system to the recorder. This means that the Neoline G-Tech X54 will start recording in response to a triggered car alarm system.

VOICE NOTIFICATION OF SPEED CAMERAS

The Neoline G-Tech X54 has a GPS module that detects the coordinates of police radars. The device is capable of notifying about fixed radars, traffic control cameras, mobile speed traps, and, of course, average speed control cameras.

The Neoline G-Tech X54 contains information about radars from over 45 countries on three continents.

Updated radar databases are available monthly on the manufacturer's website.

BACK-UP DATA TO A SMARTPHONE

The Neoline G-Tech X54 is equipped with a Wi-Fi module, and users have access to an application available on the App Store and Play Store. With the app, users can save necessary videos to their smartphone's memory or upload them to the internet in case of emergency situations. The memory card can be attached to the traffic police protocol as evidence. Additionally, users can customize the dashcam according to their preferences. By connecting a mobile device, the dashcam can be updated via Wi-Fi without using a memory card.

● REC

ADVANCED PARKING MODE

The Parking Mode of the Neoline G-Tech X54 offers a wide range of settings, voice prompts, and notifications to provide a maximum evidence base in case of accidents or other illegal activities carried out while the vehicle is parked.

+60°C

-20°C

PROTECTION FROM DIFFICULT WEATHER CONDITIONS

The Neoline G-Tech X54 is equipped with a capacitor instead of a standard battery. The capacitor is significantly more resistant to high temperatures and has a longer lifespan. The use of a capacitor solves many typical issues encountered with dashcams, such as overheating, battery explosion hazards, and the loss of "last" files.

256GB MEMORY CARD SUPPORT

The Neoline G-Tech X54 is the perfect combination of quality and reliability, incorporating the latest information processing algorithms and innovative technologies.

TECHNICAL SPECIFICATIONS OF NEOLINE G-TECH X54

- Installation method: hidden, different places
- Video resolution:
 - front camera Full HD 1920*1080 (30 fps)
 - rear camera Full HD 1920*1080 (30 fps)
- Viewing angle:
 - front camera: 130°
 - rear camera: 130°
- Video Recording Format: MOV
- Built-in condenser
- MicroSD card support, class 10+, up to 256GB
- Loop recording interval, min: 1/2/3
- Auto Power On/Auto Power Off
- Wi-Fi connection to the smartphone
- Date/time stamp
- Recording audio (when an external microphone is connected)
- Connection with car alarm system
- Temperature mode:
 - operation: -10C° - +70C°
 - storage: -30C° - +80C°
- Built-in speaker
- G-sensor
- Motion sensor
- Extended parking mode
- Input voltage: DC 12-24V
- Cable length:
 - front camera - 5,5 m
 - rear camera - 8.8 m
- Main unit mounting: textile clasp with 3M, plastic tacks, self-tapping screws
- Camera attachment: 3M tape
- Size: 69*111*21 mm
- Weight: 100 g.

EQUIPMENT

- Neoline G-Tech X54 Car DVR
- Front camera
- Rear camera
- Onboard power cable
- External GPS/GLONASS sensor
- Wired button to lock the files from overwriting
- Plastic ties - 4 pcs
- Self-tapping screws - 4 pcs
- Camera cable holder - 6 pcs
- Microphone
- Manual
- Warranty card
